

Upgrade your ArcGIS for Desktop from 10.1 to 10.2

This procedure explains in detail the different steps to follow in order to install ArcGIS 10.2 for Desktop + extensions for Concurrent Use licenses.

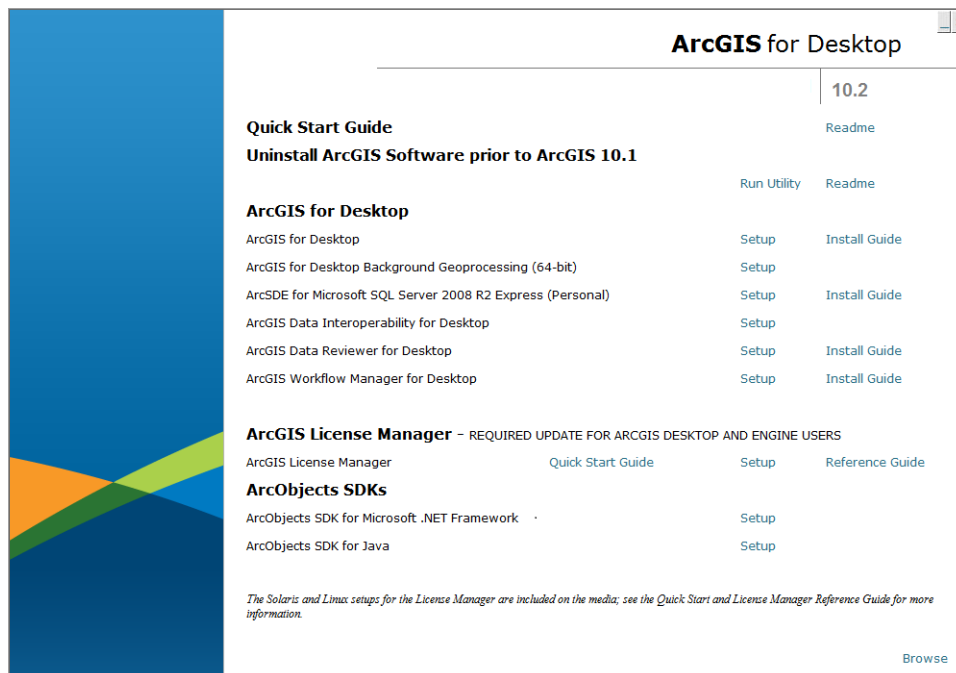

To be able to install ArcGIS for Desktop, you have to be logged in as an administrator or be authorized to manage the system.

Close all programs on your computer.

After you have downloaded the software, you will have an .iso-file. This is a “software duplicate” for DVD. You can use this file in several ways:

-  Write the content of the file on a DVD (the software is burned on the DVD);
-  Open the file with emulation software to read a CD/DVD (there are several programs you can use for free on the internet);
-  Extract the files by using 7-zip or IsoBuster (also available for free on the internet).

When you have access to the files (on DVD or unwrapped on to your computer), click ESRI.exe. The window below will appear.

If you’re working with a Concurrent Use License, please install the ArcGis License manager on your server by clicking “Setup”. Install ArcGis for Desktop on the computer that’s using the floating license of the License Manager. It is sufficient to follow the standard installation instructions.

If you’re working with a Single Use License, you only have to install ArcGIS for Desktop.

The 10.1 release will be automatically replaced by the 10.2 release. Click “Next”.

Follow the default instructions to install your software. At the end of the installation you'll be notified that the installation has been completed.

Congratulations! You can start working with ArcGIS 10.2!
